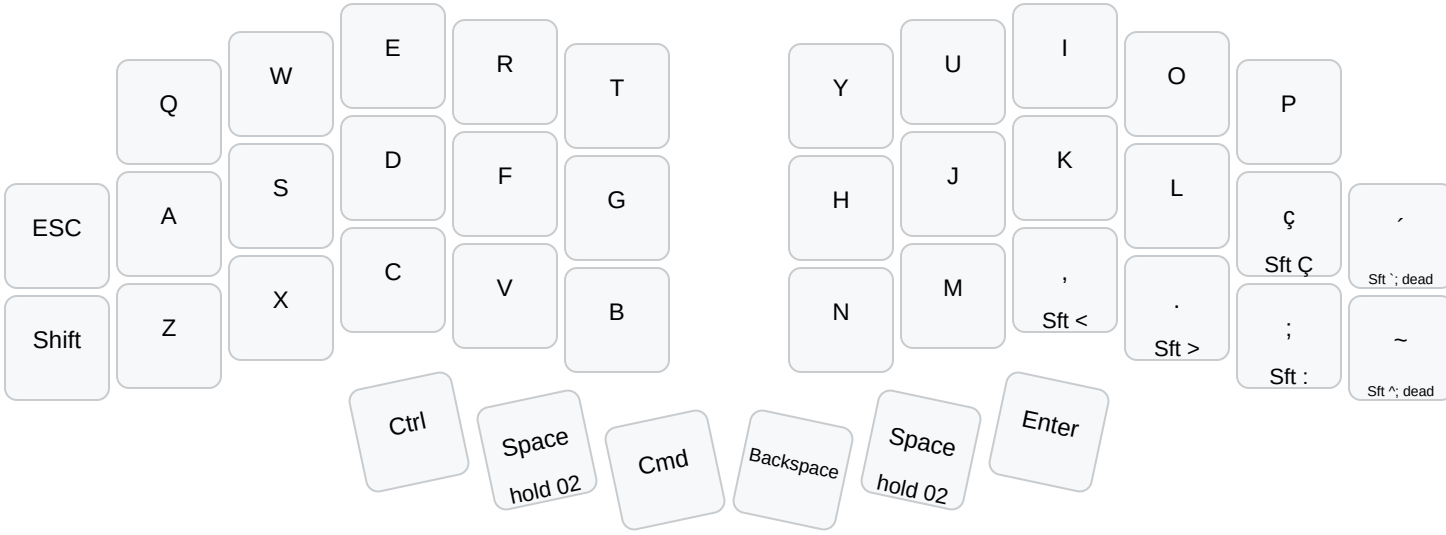
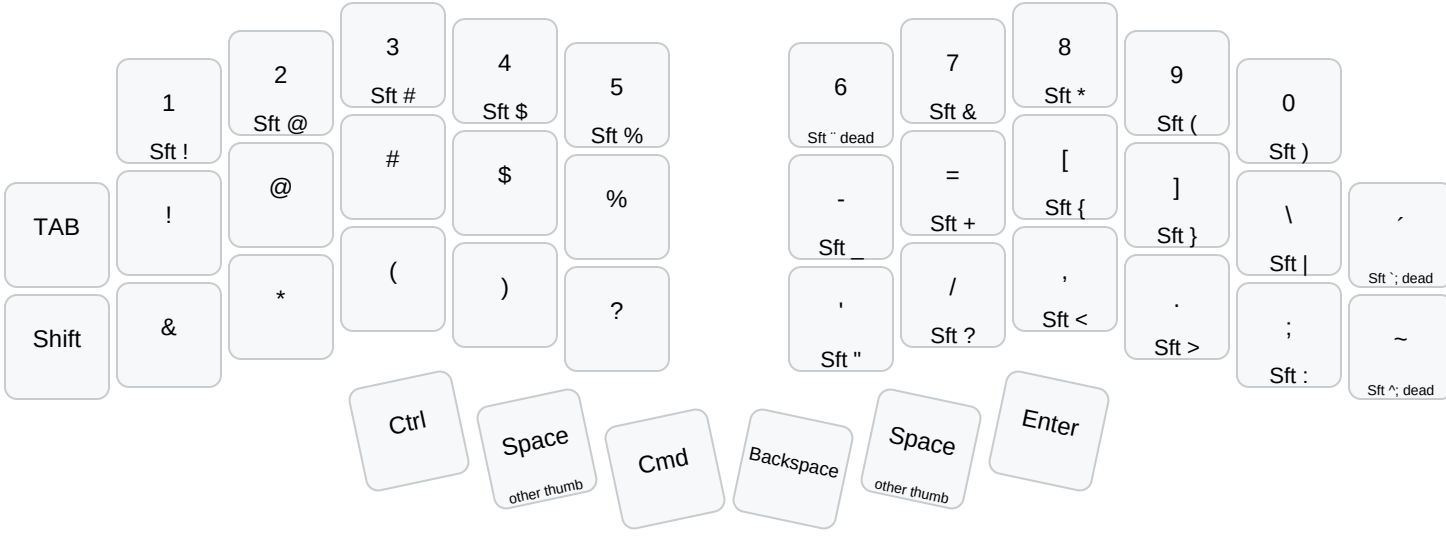
01 Guest:



02 Guest Symbols:



TOTEM guest - typist's view: left half at left; thumbs along the bottom.
Host prerequisite: select Brazilian ABNT2. HID output is not portable to a US input source.
Small Sft legend = Shift output; dead = accent then vowel (accent + Space for a literal).
Guest: either Space taps Space; hold 200 ms or press another key for Guest Symbols.
Symbols: the other Space types Space; release the activating Space to return (no handover).
Thumbs L: Ctrl / Space / Command. R: Backspace / Space / Enter. Dedicated left Shift.
Direct shifted convenience symbols need no Shift; extra Shift has no promised alternate output.
Right slider (not a typing key): intended closed = Guest, open = personal; no toggle chord.
Change mode with character/modifier keys released. Guest-off condition removes Symbols even during a hold.
D7 against row D1 and the closed detent are inferred: continuity/events need device verification.
Boot-on, reconnect/wake and held-key exit are unverified. OFF then ON recovery is NOT proven.
If the mode is wrong after reconnect, stop and verify it; do not assume slider position was synchronized.
Space timing, HID accents, both-thumb release order, sleep/current and battery impact need device tests.
